

Hi, my name is Wags. I am a 12-year old Chocolate Lab. I was having trouble with my paws and legs so my Mama took me to see Dr. Witter and we found out that I have Arthritis and Lick Granulomas.

Dr. Witter and his associates got a new procedure called Laser Therapy. I am taking treatments and it has really helped both my arthritis and the Lick Granulomas. It has helped to reduce my pain (sometimes my Mama says I have puppy in me again), the inflammation, and has sped up the healing process along with the meds I take.

Everybody at Ferry Farms Animal Clinic has treated me like a KING and the treats are not bad either!

Thanks for everything...

Sincerely,

**WAGS**
